

Title: METHOD AND SYSTEM FOR COMMISSIONING ARTICLES WHICH ARE SUITABLE FOR A CENTRAL BELT AND ARTICLES WHICH ARE NOT SUITABLE FOR A CENTRAL BELT

ABSTRACT

5 The present invention pertains to a method and a commissioning system for commissioning articles (A1) which are suitable for a central belt in a central belt commissioning system and articles (A2) which are not suitable for a central belt, preferably manually from an article warehouse or shelf (5), wherein articles which are suitable for a central belt (1) are commissioned and automatically fall directly onto the driven central belt (1) in a targeted manner, and at the end of the central belt they
10 fall into a stationary container or immediately into a container (10) arranged on the driven central belt. The articles (A2) which are not suitable for a central belt are commissioned manually in containers (10) in a commissioning path to the right and/or left of the central belt (1) of the central belt commissioning device and are directly fed to a dispatching station or preferably to the central belt commissioning device for commissioning with articles (A1) which are suitable for a central
15 belt.

(57) Abstract: The invention relates to a method and a commissioning system for commissioning articles (A1), which are suitable for a central belt in a central belt commissioning system, and articles (A2), which are not suitable for a central belt, preferably manually from an article warehouse or shelf (5), wherein articles which are suitable for a central belt (1) are commissioned and automatically fall directly onto the driven central belt (1) in a targeted manner at the end of which they fall into a stationary container or the like or a container (10) arranged on the driven central belt. The items (A2) which are not suitable for a central belt are commissioned manually in containers (10) in a commissioning path to the right and/or left of the central belt (1) of the central belt commissioning device and are directly fed to a dispatching station or preferably the central belt commissioning device for commissioning with articles (A1) which are suitable for the central belt.
